

SW-XPANEL-FOR-MAC

Virtual Touchpanel for Computers

Please see the XPanel product page for latest information.

Transform any computer into a virtual Crestron® touchpanel—including the iMac® and MacBook®. Take control of your Crestron system from any Mac® around the home, office, classroom, or world. Effortlessly bring touchpanels to the desktop of Mac OS® X with native Crestron support. Augment existing systems to add more control in more places, or use any sleek Mac as a main control interface, making a complete control solution extremely affordable. There's no need for Windows® software emulators or advanced programming. Simply click on XPanel for Mac® for a complete Crestron experience right on your Mac.

XPanel for Mac is a software application which runs on the Mac and connects to any Crestron

2-Series control system or Prodigy **Central Controller**.

Through a secure Ethernet connection, XPanel for Mac sends and receives data to and from the control system based on user commands. A customized XPanel for Mac data file resides on the control system (like a web page). This translates into an experience as simple as using a touchpanel.

At Home

- Control lights, climate, music & more from the Mac® desktop
- Extend total home control to the office without the need of an additional touchpanel
- Retain the same look that exists on other touchpanels around the house

In the Classroom

- Use existing Mac® in the classroom to control the projector,

audio, and lights

- Connect more classrooms today using software application;

add touchpanels or keypads as budget allows

- Password protection keeps unwanted users from controlling system

Native VT Pro-e® Support

XPanel for Mac® is natively supported in **VT Pro-e®** for quick and easy creation of virtual touchpanels. Save even more time and keep a professional look and feel using VT Pro-e themes which pre-define buttons, colors, and fonts. Transform existing touchpanel layouts for **iPhone®** or **iPod touch®** into XPanel for Mac and provide the same look, feel, & functionality on the desktop that is on the handheld device. XPanel for Mac provides a solution to create virtual touchpanels for the Mac directly within the Crestron GUI software tools.
